

AngularJS + Firebase

Autenticazione

POLITECNICO
DI TORINO

Obiettivi (parte 1)

- Esercizio (guidato): Partendo dal repository "social-prototype-firebase" disponibile all'indirizzo <https://github.com/SoNet-2016/social-prototype-firebase.git> introdurre l'autenticazione utente tramite Firebase.

Obiettivi (parte 2)

L'app all'apertura dovrà verificare se è già stato effettuato il login.

- a) Se è stato effettuato allora carica la lista delle pizze
- b) Se non è stato effettuato rimanda ad una pagina di login simile a quella qui sotto:

The screenshot shows a mobile application interface for 'Pizza++'. At the top, the app name 'Pizza++' is displayed. Below it, the title 'Login' is centered. There are two input fields: one for 'Email address' with the placeholder text 'Enter email', and one for 'Password' with the placeholder text 'Password'. A green 'Login' button is positioned below the password field. At the bottom of the screen, there is a navigation bar with three icons: a blue home icon, a white plus sign, and a white person icon.

Soluzioni
